

Course Outline

CERTIFIED WIRELESS NETWORK ADMINISTRATOR Course CWNA: 5 days Instructor Led

All Cisco courses are delivered by a Cisco Authorized Platinum Learning Partner

About this course

Get a head start right out of the gate with a Certified Wireless Network Administrator (CWNA) certification. It is the base certification for Enterprise Wi-Fi within the CWNP family of certifications and a springboard toward earning your security, design, analysis, and network expert certifications. Achieving it enhances your networking career profile, providing evidence that you have sought after Wi-Fi knowledge and skills.

The goal of this course is to add Wi-Fi expertise to a networking professional's skillset while covering all CWNA-108 exam topics. The course begins with discussion topics and hands-on lab exercises covering the basic operation of 802.11 Wi-Fi technology. Once a base of Wi-Fi knowledge is established, enterprise relevant topics such as Wi-Fi design, security, and troubleshooting are covered. You will use enterprise-class hardware and software tools during live lab exercises, all accessible remotely for any instructor-led or virtual class.

As an added bonus, you will receive a free exam voucher and practice test to test your knowledge before taking the exam.

Audience profile

- Administrators: network, systems, infrastructure, security, and LAN/WLANs
- Support professionals: technical assistance and field support
- Designers: network, systems, and infrastructure
- Developers: wireless software and hardware products
- Consultants and integrators: IT and security
- Decision-makers: infrastructure managers, IT managers, security directors, chief security officers, and chief technology officers
- CCNA's

At course completion

After completing this course, students will be able to:

- Background and roles of Wi-Fi governing bodies, including the IEEE and Wi-Fi Alliance
- Radiofrequency properties and behaviors
- Wireless signal fundamentals, including measurement principles
- Antenna information, including types and installation best practices
- Wi-Fi standards, including 802.11 extensions ac, ad, af, and ah
- Wi-Fi device types and infrastructure options
- Wi-Fi communications processes, including connection, roaming, and data transfer
- General troubleshooting tips to common real-world 802.11n issues
- Wi-Fi architecture best practices, including both network and wireless design
- Similarities, differences, and peculiarities about Wi-Fi deployments in differing environments (offices, K-12 education, health care facilities, and more)
- Security standards, best practices, known vulnerabilities, and remediation techniques for Wi-Fi networks
- Site surveying, including requirements gathering, design, installation, and validation

Course Outline

- Troubleshooting methodology, tools, and techniques, along with common issues

Course Outline

WLAN and Networking Industry Organizations

- Wi-Fi Related Organizations
- The IEEE
- PHY Amendments
- 802.11 Amendments
- Wi-Fi Alliance
- PoE (802.3)

RF Characteristics and Behavior

- Electromagnetic Spectrum
- Wavelength, amplitude, and other RF characteristics
- Reflection, refraction, and other RF behavior
- RF Propagation
- Basic Types of Modulation

RF Mathematics and Measurements

- RF units of measure
- Basic RF mathematics
- RF signal measurements
- Understand link budgets

RF Antennas and Hardware

- RF Units of Measure
- Types of Antennas and Antenna Systems Commonly Used With 802.11 WLANs
- Antenna Polarization and Gain
- Antenna Implementation
- Types of Antenna Cables, Connectors, and Other Accessories

802.11 PHYs and Network Types

- 802.11 PHYs and Network Types
- 802.11 Frequency Bands
- 802.11 Channels Explained
- OSI Model Layers and Wi-Fi
- 802.11 Physical Layers (PHYs)
- Throughput vs. Data Rate
- RF Modulation Methods
- 802.11 Use Case Scenarios
- WLAN Operating Modes including BSS, ESS and Roaming

Course Outline

802.11 Network Devices

- Access Point Features and Capabilities
- AP and WLAN Management Systems
- Wireless Monitoring Systems (Analytics)
- WLAN Controller Functionality
- Network Architecture Planes
- WLAN Bridging
- Client Devices
- Client Device OS Configuration
- Power over Ethernet (PoE) Functionality

802.11 MAC Operations

- 802.11 Frames
- Frame Aggregation
- Guard Interval
- General Frame Format
- PHY Preamble
- Management, Control, and Data Frames
- Locating WLANs

802.11 Channel Access Methods

- Differences between CSMA/CD and CSMA/CA
- Distributed Coordination Function (DCF)
- Network Allocation Vector (NAV)
- Clear Channel Assessment (CCA)
- Interframe Spacing (IFS)
- Contention Window (CW)
- Quality of Service in 802.11 WLANs
- Hybrid Coordination Function (HCF)
- Additional Control Frames and Protection Modes

WLAN Network Architectures

- Control, Management, and Data Planes
- WLAN Controller Solutions
- Network Architectures
- RF Channel Planning
- Service Set Configurations
- Cell Sizing and Interference

WLAN Requirements and Solutions

- Explore WLAN Deployment Scenarios
- BYOD and Guest Access
- Mobile Device Management

Course Outline

- Radio Resource Management (RRM) and other automatic RF management solutions
- Additional Management Features

Security Solutions for WLANs

- Additional Authentication Features
- Deprecated Standard Security
- Weak Security Mechanisms
- Pre-shared Key and IEEE 802.1X/EAP
- Wireless Intrusion Prevention Systems (WIPS)
- Protocol and Spectrum Analysis for Security
- Using Secure Protocols

Site Surveys, Network Design, and Validation

- Survey Processes
- Understanding Requirements
- Verify Design Requirements
- Documentation
- Locating Interference
- Spectrum Analysis
- Application and Throughput Testing
- Protocol Analysis

WLAN Troubleshooting

- CWNP Troubleshooting Methodology
- Protocol Analysis Troubleshooting Features
- Spectrum Analysis Troubleshooting Features
- RF Interference
- Hidden Nodes
- Connectivity Problems

Classroom Live Labs

Remote Lab Familiarization

- Overview
- Task 1: Navigate the GigaWave Remote Lab
- Task 2: Navigate the Interactive Diagram Page
- Task 3: Closing the Lab

Course Outline

Lab 1: Visualizing RF Principles

- Activity Objective
- Visual Objective
- Required Resources
- Task 1: Prepare the Client Laptop in the Remote Lab
- Task 2: Use Ekahau to visualize Free Space Path Loss
- Task 3: Use Ekahau to Visualize Attenuation
- Task 4: Closing the Lab

Lab 2: RF Mathematics

- Activity Objective
- Required Resources
- Task 1: Complete These Power Conversions
- Task 2: Calculate EIRP
- Task 3: Calculate a Link Budget

Lab 3: Visualizing Antenna Patterns

- Activity Objective
- Required Resources
- Task 1: Open the FSPL File in Ekahau
- Task 2: Use Various 2.4 Antenna and Observe the Change in RF Coverage
- Closing the Lab

Lab 4: 802.11 Basics

- Activity Objective
- Task 1: Analyze Wireless Frames
- Task 2: Closing the Lab

Lab 5: Initialize an Autonomous WLAN Deployment

- Activity Objective
- Task 1: Configure an Autonomous AP via CLI
- Task 2: Configure Your Standalone AP from the GUI
- Task 3: Closing the Lab

Lab 6: Configure Security on Autonomous AP WLAN Deployment

- Activity Objective
- Task 1: Configure the Autonomous AP for PSK
- Task 2: Configure Windows 7 Client to Connect to the Pod-X-Auto Using PSK
- Task 3: Add a Local Radius Client to the Autonomous AP
- Task 4: Configure Local RADIUS Server on the Autonomous AP
- Task 5: Configure an SSID for Local EAP on the Autonomous AP
- Task 6: Configure the Windows Supplicant

Course Outline

- Task 7: Closing the Lab

Lab 7: Configuring the WLC Central Switch WLAN Deployment

- Activity Objective
- Task 1: Prepare the Client Laptop in the Remote Lab
- Task 2: Review and Modify Management Access
- Task 3: Review AP Status
- Task 4: Configure a WLAN
- Task 5: Associate the Client
- Task 6: Disassociate the Client
- Task 7: Closing the Lab

Lab 8: Configuring Security in a Centralized WLAN Deployment

- Activity Objective
- Task 1: Configure the Data WLAN for PSK
- Task 2: Configure the Wireless Client to Connect to the PSK WLAN
- Task 3: Modify the WLAN to Support WPA2 with 802.1X Authentication
- Task 4: Configure the Client and Access the Network
- Task 5: Modify the WLAN to Support WebAuth
- Task 6: Create a Local Net User
- Task 7: Connect the Client to the WebAuth WLAN
- Task 8: Closing the Lab

Lab 9: Implement a WLC Local Switch WLAN Deployment

- Activity Objective
- Task 1: Configure the Controller
- Task 2: Connect to the WLAN
- Task 3: Closing the Lab

Lab 10: Configure Security on a Cloud WLAN Deployment

- Activity Objective
- Task 1: Implement PSK Authentication on a Cloud WLAN Deployment
- Task 2: Implement Local EAP-PEAP on a Cloud WLAN Deployment
- Task 3: Implement WebAuth on a Cloud WLAN Deployment
- Task 4: Disable SSIDs on the Cloud WLAN Deployment

Lab 11: Perform Wi-Fi Scanning

- Activity Objective
- Topology
- Task 1: Enable Metageek insider
- Task 2: Review 2.4 GHz Activity

Course Outline

- Task 3: Review 5 GHz Activity
- Task 4: Close the Lab

Lab 12: Perform a Predictive WLAN Design

- Activity Objective
- Task 1: Familiarization with Ekahau Site Survey Pro + Planner
- Task 2: Perform a Basic Predictive WLAN Design using a Single Floor Layout
- Task 3: Closing the Lab

Lab 13: Perform Passive Site Survey

- Activity Objective
- Task 1: Configure AP for Spectrum Expert AP Mode of Operation
- Task 2: Configure Cisco Spectrum Expert – Spectrum Analyzer Software
- Task 3: Closing the Lab
